

U.S. Northern District of New York

Plaintiff: Dr. Marco Bitetto

CASE NUMBER:1:18-cv-00922-MAD-DJS

Defendant: Ms. Ginni Rometty

Facts in the Case:

IBM sold the rights to the TrueNorth chip technology, a technology that was based upon my uniquely patented via a copyright based patent and Sold to Samsung Corporation. This patented technology was stolen by IBM (copyrighted patentable invention).

As is stated in the federal law, a copyrighted U.S. patent is given the equivalent protection of a patent for the life of the inventor and ninety nine years.

This fact was established in the case of Parker Brothers .vs. Milton Bradley that dealt with the patent infringement of a game. Most people don't know that games are both patentable and copyrightable. In this case, Parker Brothers set the standard in the law that copyrightable patentable items have the equivalent legal protection of patents.

A handwritten signature in black ink, appearing to read "Marco Bitetto".
